## Cutting Edge Winter Maintenance Technology

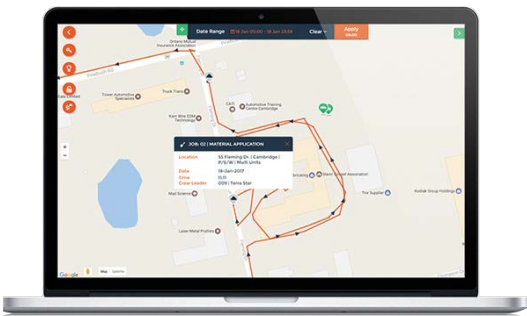

### Live Site Monitoring Systems

Winter events can be very localized and site conditions can change rapidly. Similar to the RWIS systems used by DOTs, we use pavement condition monitoring systems designed specifically for private winter maintenance industry. With **real-time pictures** of properties with **Air and Pavement Temperature**, the system enables us to ensure

- Safe site conditions at all times
- Strictly monitor quality of service
- Provide proof of service

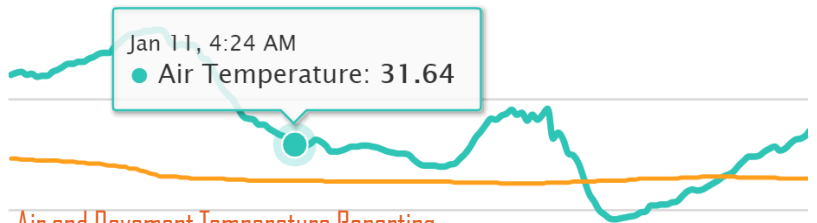

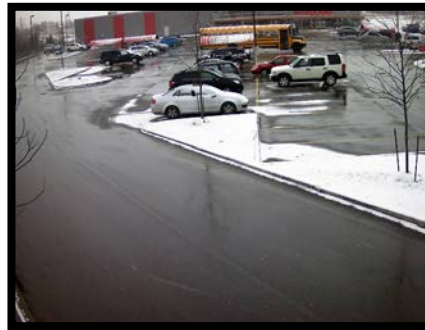

The self contained systems are **easy to install** and do not require any power or internet hookup

### GPS Enabled – Fully Automatic Salt Tracking Systems

Salt is not just an **environmental hazard** but also a significant contributor to **safety** to the overall **cost** of maintaining a property. For this reason, our trucks are equipped with state of the art fully automated, GPS enabled salt tracking systems that do not require any input from the operators and enable us to

- Monitor current and historic location of our trucks
- Monitor salt application rates every time a property is salted
- Ensure **Safety, Sustainability** and **Efficiency** by using the correct application rates
- Do more accurate and timely billing for salt
